What is claimed is:

1. A method comprising:

reviewing a first branching behavior of a first previous set of branching instructions

executed by a processor;

reviewing multiple traces that have a same beginning instruction; and

selecting a trace from among the multiple traces based on the branching behavior of the

first previous set of branching instructions.

2. The method of claim 1, further comprising:

selecting the trace from among the multiple traces that has a second branching behavior

of a second previous set of branching instructions that matches the first branching behavior of the

first previous set of branching instructions.

3. The method of claim 1, further comprising generating a new trace if a divergence occurs

in a pre-determined location in the trace.

4. The method of claim 3, wherein determining whether the new trace is generated is based

on which instruction within a block of instructions creates the branch.

Express Mail No.: EV351181075US

DOCKET NO.: INTEL 2207/17048

The method of claim 3, wherein determining whether the alternate trace is generated is 5.

based on which block of instructions the branch occurs in.

A set of instructions residing in a storage medium, said set of instructions capable of 6.

being executed by a processor to implement a method for processing data, the method

comprising:

reviewing a first branching behavior of a first previous set of branching instructions

executed by a processor;

reviewing multiple traces that have a same beginning instruction; and

selecting a trace from among the multiple traces based on the branching behavior of the

first previous set of branching instructions.

7. The set of instructions of claim 6, further comprising:

selecting the trace from among the multiple traces that has a second branching behavior

of a second previous set of branching instructions that matches the first branching behavior of the

first previous set of branching instructions.

The set of instructions of claim 6, further comprising generating a new trace if a 8.

- 12 -

divergence occurs in a pre-determined location in the trace.

Express Mail No.: EV351181075US

9. The set of instructions of claim 8, wherein determining whether the new trace is

generated is based on which instruction within a block of instructions creates the branch.

10. The set of instructions of claim 8, wherein determining whether the alternate trace is

generated is based on which block of instructions the branch occurs in.

A processor comprising: 11.

a branch predictor to review a first branching behavior of a first previous set of branching

instructions executed by a processor;

a trace cache to store multiple traces that have a same beginning instruction; and

a fetching mechanism to retrieve a trace from among the multiple traces based on the first

branching behavior of the previous set of branching instructions.

The processor of claim 11, wherein the fetching mechanism is to select the trace from 12.

among the multiple traces that has a second branching behavior of a second previous set of

branching instructions that matches the first branching behavior of the first previous set of

branching instructions.

The processor of claim 11, further comprising a processing core to execute the trace and 13.

to generate generate a new trace if a divergence occurs in a pre-determined location in the trace.

- 13 -

Express Mail No.: EV351181075US

14. The processor of claim 13, wherein whether the new trace is generated is based on which

instruction within a block of instructions creates the branch.

15. The processor of claim 13, wherein whether the alternate trace is generated is based on

which block of instructions the branch occurs in.

A system comprising: 16.

a memory to store a set of instructions;

a processor coupled to the memory to execute the set of instructions, the processor with a

branch predictor to review a first branching behavior of a first previous set of branching

instructions executed by a processor, a trace cache to store multiple traces that have a same

beginning instruction, and a fetching mechanism to retrieve a trace from among the multiple

traces based on the first branching behavior of the previous set of branching instructions.

17. The system of claim 16, wherein the fetching mechanism is to select the trace from

among the multiple traces that has a second branching behavior of a second previous set of

branching instructions that matches the first branching behavior of the first previous set of

branching instructions.

Express Mail No.: EV351181075US

18. The system of claim 16, further comprising a processing core to execute the trace and to

generate a new trace if a divergence occurs in a pre-determined location in the trace.

19. The system of claim 18, wherein whether the new trace is generated is based on which

instruction within a block of instructions creates the branch.

20. The system of claim 18, wherein whether the alternate trace is generated is based on

which block of instructions the branch occurs in.
